### Description

When an issue description or comment contains a less-than sign (<), this sign is output verbatim in the issue page, instead of being escaped with ampersand-“lt”-semicolon. This causes the issue details page to be invalid XHTML, which is contrary to the page's doctype, and makes it impossible to read the page with an XML parser. I created an issue on the demo site to demonstrate the problem.

To reproduce, run `xmllint URL-OF-ISSUE-PAGE`, like this:

```bash
$ xmllint http://demo.redmine.org/issues/38181
http://demo.redmine.org/issues/38181:166: parser error : StartTag: invalid element name
  <p>Hm: </p>
  mg alt="Comment" src="/images/comment.png?1286930539" /></a></div><p>And this? <
^  http://demo.redmine.org/issues/38181:330: parser error : Entity 'copy' not defined

The third error is a false positive (xmllint doesn't know XHTML entities), but the first two errors are symptoms of this problem.
