Redmine - Defect #6987

Missing template wiki/update.erb

2010-11-26 12:14 - Milan Stastny

Status:	Closed	**Start date:**	2010-11-26
Priority:	Normal	**Due date:**	
Assignee:	Jean-Philippe Lang	**% Done:**	0%
Category:	Wiki	**Estimated time:**	0.00 hour
Target version:			
Resolution:	Fixed	**Affected version:**	

Description

Hi today we ran into Internal Error when trying to update previously deleted page.

The way to reproduce this is

- Add wiki page
- Edit something on it
- Delete the page
- Add the page again

After that redmine throws this error:

```
Processing WikiController#update (for 10.0.1.207 at 2010-11-26 12:00:44) [PUT]
  Parameters: {"commit"=>"Save", "project_id"=>"alvila-admin", "action"=>"update", "_method"=>"put
", "id"=>"TEST", "content"=>{"comments"=>"", "text"=>"h1. TEST\r\n\r\nNew page", "version"=>"0"},
"controller"=>"wiki", "attachments"=>{""=>{"description"=>""}}}

Associated revisions

Revision 4429 - 2010-11-27 11:34 - Jean-Philippe Lang

Fixed: Missing template wiki/update.erb error introduced in r4272 (#6987).

Revision 4430 - 2010-11-27 12:14 - Jean-Philippe Lang

Fixed: Wiki#find_page should not be case sensitive because page title uniqueness is not (#6987).

History

#1 - 2010-11-26 12:18 - Milan Stastny

The problem is somewhere else, the way to reproduce is wrong

There have been two separate links to the page one

```
[[Test]]
```

The other one

```
[[TEST]]
```

After that the internal error occurred. Seems like the page search is case insensitive but the page Update is case sensitive.

#2 - 2010-11-27 12:08 - Jean-Philippe Lang

- Status changed from New to Closed

- Affected version (unused) changed from 1.0.3 to devel

- Resolution set to Fixed

- Affected version deleted (1.0.3)

The *Missing template wiki/update.erb* error is fixed in [r4429](#).
The page search was indeed case sensitive with postgresql. It's fixed in [r4430](#). The 2 wiki links in your example should now link to the same page.

#3 - 2011-02-09 02:21 - HyunKil Song

- Status changed from Closed to Reopened

- Assignee set to Jean-Philippe Lang

Another way to reproduce like this

- A open wiki page 1 and edit something
- B open wiki page 1 and edit something
- A submit wiki page 1
- B submit wiki page 1

The *Missing template wiki/update.erb* error occurs.

#4 - 2011-02-09 02:32 - HyunKil Song

Concurrent editting in Wiki is very basic feature.
I tested in my env (1.1.1) and demo.redmine.org.

#5 - 2011-03-01 10:48 - Alex Shulgin

- File redmine-1.1-fix-missing-template-wiki-update-erb.patch added

I was hit by this problem too (trying to update a wiki page which was updated in the way.)

Attached is an easy fix for this problem: render edit template when leaving update method from the rescue block.

Alex

#6 - 2011-06-20 02:35 - Jean-Baptiste Barth

- Status changed from Reopened to Closed

I cannot reproduce on current trunk with HyunKil's steps, is it specific to postgresql ? Anyway, it's not the same problem as the original one, so I re-close this issue and encourage you to open a new one with detailed steps to reproduce the problem. Alex: thanks for your hint but I'd like to be sure to see which case it covers (with a test) before applying it.
