Target version:			
Resolution:		**Affected version:**	

Description

Sample code:

```
# list1
|_. Test|_. Test2|
|Testing|And yet another test|

# list2
```

Current result:

1. list1

Test	Test2
Testing	And yet another test

1. list2

But the second list2 sould be *2. list2*.

History

#1 - 2010-11-27 08:26 - Ivan Cenov

Hi,

The latter list is another list, not the tail of the first one.

Another question arises: is it possible to set beginning value of a numbered list.

#2 - 2010-11-27 11:05 - Andras Elso

> The latter list is another list, not the tail of the first one.

No, because the table sould end with two newline char or one \Z char (whatever is that :o). So if i want to a new list after a table, i sould use 3 newlinechar.

#3 - 2010-12-03 10:23 - Felix Schäfer

I'd say that's a bug with textile, might be better when/if we migrate to the current version of the textile formatter.

- Status changed from New to Closed

To continue a list in Textile, there must not be a empty line before a list item. To continue adding content to the current list item, you can indent the content with two spaces. You still need an empty line before a table for it to be correctly recognized though. As such, the following syntax should work:

```
# list1

  |_. Test|_. Test2|
  |Testing|And yet another test|
# list2
```

This renders as:

1. list1

Test	Test2
Testing	And yet another test

2. list2

```
# list1

  |_. Test|_. Test2|
  |Testing|And yet another test|
# list2
```
