| Description In the Groups -> Projects section under administration: Instead of the combo box dropdown for single project selection, it would be good to have a multi-select list view where user groups can be assigned as members of multiple projects in one hit (as opposed to selecting each project and adding it in turn). | | | |

+1

Working with big projects with lots of stakeholders, I push for thinking in groups as much as possible. Groups took away a lot of the tedium of adding individuals to projects, but there's still the tedium of adding a newly built group to all projects they need access to.

It's not a huge hassle, but it'd be "nice", you know?
