Resolution:	Invalid		

Description

I'm trying to post the below text as a solution to my other question, <http://www.redmine.org/boards/2/topics/19995>, but I keep getting told that it looks like spam. Any idea why?

So I started poking 'round and got this all done myself, mainly through edits to 'account_controller.rb'.

I made a few superficial edits to login.rhtml and register.rhtml, to stop showing the username and password form by wrapping them in a '<% if not Setting.openid? %>' tag. Here's where the main part was done, though,

```
def open_id_authenticate(openid_username)
  if not openid_username.nil?
    openid_url = 'http://openid.myserver.com/identity/' + openid_username
  end

  authenticate_with_open_id(openid_url, :required => [:nickname, :fullname, :email], :return_to =>
signin_url) do |result, identity_url, registration|
    if result.successful?
      user = User.find_or_initialize_by_identity_url(identity_url)
      if user.new_record?
        user.login = registration['nickname'] unless registration['nickname'].nil?
        user.mail = registration['email'] unless registration['email'].nil?
        user.firstname, user.lastname = registration['fullname'].split(' ') unless registration['fullna
me'].nil?
        user.random_password user.register register_automatically(user) do
          onthefly_creation_failed(user)
        end
      end
    =begin
    We are registering with openid registration only, so this is not needed.
    case Setting.self_registration
      when '1'
        register_by_email_activation(user) do
          onthefly_creation_failed(user)
        end
      when '3'
        register_automatically(user) do
          onthefly_creation_failed(user)
        end
      else
        register_manually_by_administrator(user) do
          onthefly_creation_failed(user)
        end
      end
    =end
    else
    # Existing record
    if user.active?
      successful_authentication(user)
    else
      account_pending
    end
  end
end
```

```
end
end
```

I also threw in 'invalid_credentials' to password_authentication there, to ensure that can't come in at all. So now registration is disabled, but you can login and automatically get registered, but only if you're coming from our OpenID server. Working perfect now!

- *Status changed from New to Closed*
- *Resolution set to Invalid*

I had to setup a spam filter on redmine.org. I think your post is rejected because of the fake openid.myserver.com url. Strip the entire url and it should work.
