| <b>Description</b><br>When Preview edited text i always have to scroll around, especially if i have bigger wiki sites. This is not a nice user experience. If you have a look at Jira, they have realized the preview by showing it at the same place where the text is, kind of radio button on the right side of the editor. You can switch between preview and editing, but see the preview text on the same place where the text is edited, what makes less scrolling necessary.<br><br><b>Editig Text...</b><br><br>Text.jpg<br><b>After clicking preview Button on right side of Editor...</b><br><br>Preview.jpg |                 |                        |            |

I think the new Edit/Preview tabs added in [#27368](#) for the upcoming Redmine 4.0.0 cover all the requirements from this ticket. Please reopen if something is missing.
