Redmine - Feature #7185

not clear which parameter is not recognized when 404 is returned for invalid project key and query ID

Description

I'm sending request:

```
get all issues with projectKey=... and query id = ...
```

one of these fields is invalid, and I don't know which one (it's some parameter provided by user).
or maybe they are both invalid.

the server responds "404 not found", which is expected.

now, how can I understand which parameter was not recognized exactly - projectKey or queryID?
is it possible to provide some kind of XML response in addition to 404 in this case?
