Description				
	ept of branches inside the same repository (he main branch and not the other ones.	as opposed to "use and	ther repository	as branch"). Currently,
Handling the named	branches would mean:			
revision logs,	om those branches in the repository tab (/proj) those branches when matching for 'fixes' 're		jects/xx/reposi	tory/revisions, individual file

Git and Mercurial support branch.

Git in repository root shows **master branch**. Git master branch does not have all revisions.

Mercurial default branch is **default branch**. Mercurial shows **tip** in repository root.

Mercurial does not treat directory. "hg log DIR" costs high. Getting correct limited changesets in sub directory and branch is very heavy. So, if there is no recent revision in sub directory and branch, no changeset shows.

History
