This feature would be useful to create templates of the project (with subprojects), just change the name of the parent project and keep the name of the subprojects.

I'm trying to make a patch, if someone could help me I would appreciate (function of lft rgt),
I think lft is the next subproject in the branch until rgt is lft+1, if this lft is not the lft of the parent+1 exit more subproject in the parent.

Is this the correct operation?

Thanks

#2 - 2011-02-10 11:12 - Luis Serrano Aranda

lft in the parent is 199 and rgt is the number +1 of the last project

If the project don't have subprojects $rgt = lft + 1$

I move this to the development forum
