Description

Mod_security protects against problematic applications, bots, application vulnerabilities, and the like. Since Redmine Mailhandler doesn't have a user-agent, it also gets rejected by the default rules. As the Redmine repository manager already has a user-agent, it would be proper to also add one here for clarification of 'what' is sending a POST to /mail_handler (even though we both know what it is). Maybe something similar to the Redmine repository manager's user-agent, "Redmine Mail Handler/#{version}" or "Redmine Mailhandler/#{version}" :)

Associated revisions

Revision 4725 - 2011-01-15 15:48 - Jean-Philippe Lang

Adds a User-Agent header to Redmine mailhandler requests (#7318).

History

#1 - 2011-01-13 12:06 - Be Fio

- File user-agent.diff added

#2 - 2011-01-15 15:49 - Jean-Philippe Lang

- Status changed from New to Closed

- Target version set to 1.2.0

Committed in r4725 with a slight change to user agent string. Thanks.
