Description

Scenario: looking for an issue, do a search and 5-10 issues are returned.

Only way to 'go through' each one is the click, go back, click go back ....

Feature request: similar to wiki breadcrumbs have a result set aware 'vcr' navigation menu on site/issues/#

<< first
< previous
current # OR show results

    next

       last

Not suggesting text or layout, just would like an easier way to quickly look through several tickets.
