Resolution:			
Description hi all, I intalled today redmine, and I'm quite impressed, but after more hours I had to restart the redmine (I tried to set up some plug-ins) and now I got this error: "Proxy Error The proxy server received an invalid response from an upstream server. The proxy server could not handle the request GET /redmine. Reason: Error reading from remote server " I tried to search for a solution but no one positive; i searched thru the logs (redmine and mongrel), i found some error only in mongrel, but also those were from the begining, so i can't take a conclusion. Im had attached both. Can you help me please to put this on again? Thank you, Ionut

You have a .yml file the parser can't load, those files are usually configuration files in redmine, and it seems you have a authentication: : none somewhere in one of those files, it should probably read authentication: :none though.

- Status changed from New to Resolved

Thanks,
Indeed this was the issue.
A nice day, Ionut

- Status changed from Resolved to Closed

Glad you could solve it. Please use the forums for future support requests though, this tracker is for bugs in redmine only.
