Description Currently when you add a custom field you can choose from things like text, boolean, date, etc. I want to add text, but it should display as a link. You will know best how to implement this. Perhaps a check box "display as link" or "do not escape html" but I guess that is risky, perhaps its a different type of custom field. Thanks,

This can easily be done in about 1 minute.
simply wrap the line that renders the custom_value in the auto_link() function like this:

```
auto_link(simple_format_without_paragraph(h(show_value(value))))
```

and you instantly have clickable links
