

Redmine - Defect #7485

git commit --amend doesn't produce appropriate results in the repository browser

2011-01-28 22:57 - Toni Mueller

Status:	Closed	Start date:	2011-01-28
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	1.0.5
Resolution:			
Description			
<p>I pushed a commit that I created with --amend since I had forgotten to add two files. In the repository browser, I can see a list of files like this:</p> <pre>file1 <git rev spec> file2 <another git rev spec> added1 added2 file3 <yet another git rev spec></pre> <p>Please note the missing rev specs for the two files 'added1' and 'added2'. I can click 'View', though, and see the file, just not the history & stuff.</p> <p>I'm using git 1.7.1.</p>			

History

#1 - 2011-01-28 23:16 - Toni Mueller

After doing a normal commit and a normal git push, these files still don't gain any history. With eg. 'git log added1', I can see their history just fine.

#2 - 2011-01-28 23:20 - Toni Mueller

Deleting the files, then commit, then add the files, then commit again (ie, w/o --amend or -f) still does not gain them history.

#3 - 2011-01-28 23:45 - Toni Mueller

- Status changed from New to Resolved

pebkac, darn!

#4 - 2011-01-28 23:58 - Toshi MARUYAMA

- Status changed from Resolved to Closed
