Description

In r4509 I changed the way test_helper was required in all our tests, so that tests could run on ruby 1.9.2 (ftr, ruby 1.9.2 no longer includes "." in $LOAD_PATH by default). This change was also made to ease test runs from command line (e.g. ruby /path/to/one/test.rb).

Gregor said on github that a simple require 'test_helper' would be good enough with ruby's -I flag.

Any thought about that ? If not, I'll replace them with simplers require 'test_helper'.

No clue but that would be cleaner, for sure :)
