Description

Wouldn't it be great if Redmine had another element (dropdown list - select) above every description textarea (where there are: bold, italic, underline, h1, h2, h, etc...) with syntax coloring?

Its function would be simply to paste the code:

```
<code class="selected_language">
</code>
```

Example of the select list:

PS. It would be even greater if the PM could have selected supported languages at the project's settings.
