

Redmine - Defect #7589

Wiki page with backslash in title can not be found

2011-02-09 12:40 - Yuriy Vidineev

Status:	Closed	Start date:	2011-02-09
Priority:	High	Due date:	
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:	1.1.3	Affected version:	1.1.0
Resolution:	Fixed		

Description

A short time ago i update my redmine 1.0.5 to 1.1.1 and found such problem: if i create wiki-page, containing backslash (\) in name, this page becomes totally unusable - i can modify this page, but can't see my modifications (after i hit "Save" this page simply load as new blank).

How to reproduce:

1. Create page with backslash (for example, [2011\02\09](#))
2. Modify it and save
3. Can you now get you modification?

This defect reproduced on demo server:
<http://demo.redmine.org/projects/adeptest/wiki>
Try to edit page named 2011\02\09 and save it.

Redmine 1.0.5 doesn't have this defect.
I have nginx+passenger on Debian Lenny
P.S.: Sorry for my terrible english

Revision 5097 - 2011-03-12 14:42 - Jean-Philippe Lang

Fixed: wiki page with backslash in title can not be found (#7589).

History

#1 - 2011-03-12 09:17 - TridenT Job

bug reproduced.

In the wiki page, create a link to a page named with slash

```
h1. Wiki
```

```
[[2011\02\09]]
```

=> Once clicked to add content to the page, **impossible to save the page**.

The preview is ok.

#2 - 2011-03-12 14:42 - Jean-Philippe Lang

- Subject changed from backslash in wiki to Wiki page with backslash in title can not be found

- Category set to Wiki
