Description

We need to report on a custom field of a project in the time spent report. For example, consider projects as different lines of business, so each project will have a list type custom field that selects the line of business. In the time spent report you would then want to select line of business to view the time logged against each line.

This issue and surrounding issues has thoroughly been discussed here, however I can't find any resolution of why it is not going to be implemented or if it is planned to be implemented.

Any input/help will be greatly appreciated.

There are too many open issues cluttering this site. I'm closing my issue.

Don't - perhaps some day it'll get implemented...
