

Redmine - Defect #7658

OpenLDAP authentication: Invalid user or password

2011-02-19 15:07 - Laurent Nominé

Status:	New	Start date:	2011-02-19
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	LDAP	Estimated time:	0.00 hour
Target version:		Affected version:	1.0.1
Resolution:			
Description			
<p>It seems that Redmine versions > 1.0.0 have a problem with OpenLDAP. I've configured LDAP authentication with valid settings (works on 1.0.0) on Redmine 1.0.1, 1.0.5, 1.1.1 and my attempts failed with a "Invalid user or password" message. I did further tests with Active Directory servers, all of them allowed me to authenticate. So I really think that it's related in some way to OpenLDAP.</p> <p>Setup 1-2:</p> <p>Redmine 1.0.1 - Redmine 1.0.5 Rails 2.3.5 Ruby 4.5 MySQL 5.1</p> <p>Setup 3:</p> <p>Redmine 1.1.1 BitNami stack</p> <p>For information, my OpenLDAP server is configured as a metadirectory (accounts are stored in two Active Directory servers)</p>			

History

Erratum: It's not working either in 1.0.0, I forgot that I was using a third-party authentication plugin on this setup.

#2 - 2011-03-02 09:57 - Domen Kožar

Did you check "create users on-the-fly", since you have to register on redmine for first usage?

#3 - 2011-03-02 10:28 - Laurent Nominé

Yes. Anyway, it's perfectly working with AD. But not with OpenLDAP, at least in a meta-directory configuration.

Is this issue the same as [#6925](#)?
