Description

hi,
I had implemented LDP authentication, login working fine, but all my plugins menus are with "translation missing: en-GB, label_..."
Simple login is working fine and all menus are ok.
In application > administration > Display language is English...
After that I thought that the language is taken from regional settings, but again I was wrong.
What I had observed and this makes me to thinkt it's an issue is that for LDAP authentication the langauge terms will be read only from Redmine/config/locales/ *.yml, but when simple login is used the plugins terms are read from plugins localization as well.
Redmine version 1.0.4
Thank you, Ionut
Thanks, Ionut
