Description

A user just emailed me about non functioning wiki - it was just impossible to edit any wiki page, because of 404 errors. I got redirected to URLs like redmine/wiki/history?page=Wiki, which just made Redmine complaining about URLs it gave.

I'm using the SVN version, rev 4917 as said by svn update:

```
Path: .
URL: http://redmine.rubyforge.org/svn/branches/1.1-stable
Repository Root: http://redmine.rubyforge.org/svn

What's your redmine and http server logs look like ?

#4 - 2011-03-05 17:18 - Thibaut Cuvelier

You could also try to deactivate all of your plug-ins, that just did for me.

When I click on the "Edit" button, I get the following link on all wiki pages

<http://test.com/wiki/edit?page=test> (root page) or

<http://test.com/wiki/test/test/edit> (other pages)

and this error

404

After I manually enter the link and everything works

<http://test.com/projects/demonstr/wiki/test/edit>

But, there are no errors in logs

Go to your plug-ins folder (vendor/plugins) and move somewhere else everything that is not included with Redmine (cf. repo for the list). Check it works. Then move back your plug-ins one by one, checking which one is culprit.
