Target version:		Affected version:	
Resolution:	Invalid		

Description

When i want translate some text __ and in file application/i18n/pl.php have 'text'=>'moj text' then on return i get 'text' but should be 'moj text'. Maybe i doing some wrong but a function __() have variable to language.
I found someting like this:

```
function __($string, array $values = NULL, $lang = 'en-us')
{
    if ($lang !== I18n::$lang)
    {
        // The message and target languages are different
        // Get the translation for this message
        $string = I18n::get($string);
    }

    return empty($values) ? $string : strtr($string, $values);
}
```

Function I18n::get(\$string); should have 2 parameters like this I18n::get(\$string,\$lang);
