

Redmine - Defect #7815

Still HTTPS

2011-03-08 20:53 - franz baumann

Status:	Closed	Start date:	2011-03-08
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
Description			
<p>hello,</p> <p>we are running a redmine installtion the first time behind a hardware loadbalacer and when we activate "Authentication required" and someone is browsing to the starting page https://domain.com/ -> then the user is redirected to http://domain.com/login?back_url=http</p> <p>we cannot set</p> <pre>RequestHeader set X_FORWARDED_PROTO 'https'</pre> <p>at the loadbalancer. when setting this on the backend servers this doesnt change anything. wouldnt it be useful if redmine would read the virtual host setting ServerName https://domain.com ? this works for any other application (like shibboleth stuff) but not for redmine.</p> <p>any ideas how to solve this?</p>
