

Redmine - Feature #7957

Customizable location of {installdir}\files

<b>Description</b> I would prefer a customizable location for the user files, now - as far as I can see - hardcoded to {installdir}\files.  This would give us two rewards: <ul style="list-style-type: none"><li>• The files don't need to be moved to a new location with every update of Redmine.</li><li>• While redmine could sit in a "software" region of the system (On Win systems C:\Programs), the files can be rest in peace on a separate data partition (on Win systems i.e D:\files), allowing i.e. separate backup and defrag cycles.</li></ul> I don't expect that to make its way into the UI, but it could be somewhere in the config files on the server.			
<b>Related issues:</b> Is duplicate of Redmine - Feature #1236: Make destination folder for attachme... <div>Closed2008-05-14</div>

- Resolution set to Invalid

There already exists a setting named attachments\_storage\_path in configuration.yml (see [source:trunk/config/configuration.yml.example#L93](#)) for that purpose.

Small additional note: **already exists** is a bit misleading since this is a new feature that will be available with upcoming Milestone [1.2.0](#) (to be released on 2011-04-30), see feature request [#1236](#) (and also Patch [#1511](#)).  
(Sorry, my profile permissions are standard/basic... If I could, I would have linked this duplicating ticket to [#1236](#) to enhance ticket browsing...)

- Resolution changed from Invalid to Duplicate

Thanks for the precision.
