Hi

I am using MySQL 5 and I am getting some errors when I run the
  rake migrate RAILS_ENV="production"
I have attached the errors here:

In 001_setup.rb

MySql::Error: #42000BLOB/TEXT column 'possible_values' can't have a default value:

CREATE TABLE custom_fields (`id` int(11) DEFAULT NULL auto_increment PRIMARYKEY,
  `type` varchar(30) DEFAULT " NOT NULL,
  `name` varchar(30) DEFAULT " NOT NULL,
  `field_format` varchar(30) DEFAULT " NOT NULL,
  `possible_values` text DEFAULT ",
  `regexp` varchar(255) DEFAULT ",
  `min_length` int(11) DEFAULT 0 NOT NULL,
  `max_length` int(11) DEFAULT 0 NOT NULL,
  `is_required` tinyint(1) DEFAULT 0 NOT NULL,
  `is_for_all` tinyint(1) DEFAULT 0 NOT NULL) ENGINE=InnoDB

The following tables have the similar error:

<table>
<thead>
<tr>
<th>TABLE NAME</th>
<th>COLUMN NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>custom_values</td>
<td>value</td>
</tr>
<tr>
<td>documents</td>
<td>description</td>
</tr>
<tr>
<td>issue_histories</td>
<td>notes</td>
</tr>
<tr>
<td>issues</td>
<td>description</td>
</tr>
<tr>
<td>news</td>
<td>description</td>
</tr>
</tbody>
</table>

In 010_create_comments.rb:

<table>
<thead>
<tr>
<th>TABLE NAME</th>
<th>COLUMN NAME</th>
</tr>
</thead>
<tbody>
<tr>
<td>comments</td>
<td>comment</td>
</tr>
</tbody>
</table>

I just removed the DEFAULT` ' next to the text fields and the schema got created.
I have the 0.4.2 version of Redmine.

After researches, this problem occurs when mysql is running in
strict mode, which seems to be the default mode set by the mysql windows installer.
There's no problem when strict mode is disabled.
I'll try to look at it more in depth and fix the migration scripts.

Thanks for your submission.
Regards,
Jean-Philippe
