Description Sometimes it is useful to attach not a file but link to file. Examples of use cases can be: <ul style="list-style-type: none">• link to Google Docs or similar service;• link to external file storage (e.g. ftp);• etc... actually, it can be a link to any resource. Of course, we can post links into the task description or comments but it would be much better to cumulate all attachments in one section. So, I suggest to rename task's section "Files" to "Attachments" and add input field to post a link. If we post link instead of file then "Optional description" becomes a link.

One more use case: a link to the items in Documents/Files modules.

E.g.: one file may need to be attached to several tasks. Uploading it to Documents/Files will avoid duplication.
