Description			
Hi, I implement this Javascript (http://www.redmine.org/issues/244) in the edit.rhtml, so now I see the preview of the page on the right side. The text area is limited to 25 rows. If I enter more than 25 rows the text are becomes a scrollbar. But the preview is getting larger and making larger/longer the page. How can I resize the text area, where I am typing the conten? In the trac system it is solved with this: <pre><script type="text/javascript"> jQuery(document).ready(function(\$) { \$("#text").blur(function() { \$("#scroll_bar_pos").val(this.scrollTop); }).get(0).scrollTop = \$("#scroll_bar_pos").val(); \$("#editrows").change(function() { resizeTextArea("text", this.options[this.selectedIndex].value); }); function autoResizeText() { var preview_height = \$("#preview").height(); if (preview_height) \$("#text").height(preview_height); } autoResizeText(); \$(window).resize(autoResizeText); \$("#text").autoPreview("/trac/ecom/wiki_render", { realm: "wiki", id: "Drucker" }, function(textarea, text, rendered) { \$("#preview div.wikipage").html(rendered); autoResizeText(); }); }); </script></pre> Are there possibilities to make the same with ruby? I am not a good programmer. Best regards, Vige
