Description

Hello,

every time I add a wrong relationship on the related issues section, I have to delete the relationship and add it again, with the correct relationship. There's no option to edit the already created relationship (by edit button, context menu, etc).

It would be nice to have such a feature on the next releases.

For me the frequent edits would be to change Blocks to Precedes (and Blocked By to Follows), and updating the Delay of Precedes/Following relations.
