If you have a wiki page with the following structure:

1. Section A
   1.1 overview
      ...

2. Section B
   2.1 overview
      ...

the `{{toc}}` macro cannot distinguish between 1.1 and 2.1, since it uses `#overview#` for both, thus ending up in 1.1.

Redmine version: 1.1.2

This is not bullet-proof as it wouldn't make unique anchors with the following:

1. Section A
   1.1 overview
   1.1.1 subsection
   ...
2. Section B
   2.1 overview
   2.1.1 subsection

I fixed it in r8871 by using -2, -3... at the end of anchors (similar to what mediawiki does).

This is out of the scope of this fix but you can use h1(#anchor) to have custom anchors. This is part of the textile syntax.

Thank you very much.

This will do just fine.
