Redmine - Defect #8194
{{toc}} uses identical anchors for subsections with the same name
2011-04-20 09:19 - Philippe De Ryck

Status: Closed
Priority: Normal
Assignee: Jean-Philippe Lang
Category: Wiki
Target version: 1.3.2
Resolution: Fixed

Description

If you have a wiki page with the following structure:
1. Section A
   1.1 overview
   ...
2. Section B
   2.1 overview
   ...

the {{toc}} macro cannot distinguish between 1.1 and 2.1, since it uses #overview# for both, thus ending up in 1.1

Redmine version: 1.1.2

Associated revisions
Revision 8871 - 2012-02-14 09:09 - Jean-Philippe Lang

Fixed: {{toc}} uses identical anchors for subsections with the same name (#8194).

History

#1 - 2011-04-20 09:59 - Etienne Massip
- Category set to Wiki
- Target version set to Candidate for next major release

Anchor name could be prepend with parent title anchor.

I would like to +1 this.

And maybe extend the requirement by allowing custom anchor names. Would be most useful in wiki when trying to write a use guide that would produce a "pretty and informative url"

i.e.
To enter a bank fee click...

This is not bullet-proof as it wouldn't make unique anchors with the following:

1. Section A
   1.1 overview
   1.1.1 subsection
   ...
2. Section B
   2.1 overview
   2.1.1 subsection

I fixed it in r8871 by using -2, -3... at the end of anchors (similar to what mediawiki does).

This is out of the scope of this fix but you can use h1(#anchor). to have custom anchors. This is part of the textile syntax.

Thank you very much.

This will do just fine.
