Redmine - Feature #8198
Lost target version when moving ticket around

2011-04-20 12:02 - Markus Korber

Description

When I move a ticket with a target version from one project to another (where the target version does not exist) the target version information is lost. I understand the reason behind this because the target version is project specific.

However, it might be good to issue a warning message (instead of silently deleting the version) or even allow the user to copy the version info into the other project.
