Description

I'm trying to convert my company over to Redmine, and all and all they like it better, but one feature that Trac has that keep pointing to over and over.

When editing a wiki page, if a source file is referenced in the wiki markup, and that checked in object happens to be an image, then Trac renders that image on the page. It makes it very easy to checkin images and use them in multiple wiki pages, and revision them, without ever having to upload them again.

What I'd like it for images checked into the repository to be rendered instead of linked.
