Redmine - Patch #8301

queries/_filters.rhtml inefficient.

Target version:				

Description

On my system (fairly complex, ~30 projects, several hundred versions etc.)   The issue list page is **slow** to load. Almost no time is reported in the DB, most of the time is spent in the view, most of which is spent rendering the filters.

This patch reduces some of that load by avoiding (I think) an un-neccessary sort of the filter options, I suspect the loop traversal could occur just once instead of twice.

Patch attached. For me this shaves ~33% of the render time off!

History

#1 - 2018-01-16 11:19 - Go MAEDA

- Status changed from New to Closed

The successor app/views/queries/_filters.html.erb uses JavaScript to collect available filters since r10162 and unnecessary query and sort was removed.

Thank you for your contribution.
