

## Redmine - Feature #8306

### Quick links on the "Projects" page

<b>Description</b> <p>It would be great if we could have some quick links to common tasks/pages on the "Projects" page, i.e. the page where all available projects are listed (<a href="http://www.redmine.org/projects">http://www.redmine.org/projects</a>).</p> <p>Currently, this page only contains links to the projects' overview pages which is almost never what I want. I would rather like to...</p> <ul style="list-style-type: none"><li>• go to the project's issues</li><li>• add a new issue</li><li>• go to the roadmap</li><li>• go to recent activity</li><li>• ...</li></ul> <p>All this currently takes a few clicks. For example, if I am watching an issue in project A, and want to switch to an issue in project B, I currently click on "Projects" in the main menu, click on the project, click on "Issues", and click on the desired issue. So 4 clicks and page loads - which might take some time depending on the server's response time!</p> <p>I propose to add small links behind/below the project name/description which take the user to the respective page directly. It would also be a neat feature if the user could open the latest 5-10 issues directly from the "Projects" page. This could be a drop-down or an expander control which dynamically loads the issue links only when it is expanded. This way, the example above would be reduced to 2 clicks.</p> <p>See the attached screenshot for a sketch of a GUI proposal.</p> <p>I would implement this myself as it does not sound too complicated, but unfortunately I have no knowledge of Ruby...</p>

I thought I add the image inline, so that it is not necessary to find the image... cannot edit the original issue description unfortunately.

Why not use "Jump to a project..." drop-down list next to the Search Edit box (up-right)? If you have entered the issues list of a project jumping to another project will bring you directly to the the issues list of that project.

Patch [#9697](#) provides the info about progress of all projects and adds direct links to project's issues, versions and version's issues.

#### #4 - 2012-12-18 11:45 - Daniel Felix

+1 for this.

But the "issues" dropdown isn't much useful. On projects with some hundred open tickets, this dropdown would be quite overloaded. ;-)

#### #5 - 2012-12-18 18:10 - Dmitry Babenko

[Progressive Projects List](#) plugin solves this issue.

**#6 - 2012-12-19 11:23 - Daniel Felix**

Yes i know, but plugins could be tricky if the core changes. And this one is quite useful, which would make it worth to add this to the system core.

I use the same functionality in many other ticket tracker and crm software. I experienced that many people liked this. :-)

That's why I wrote *"opens drop down with latest issues"* in the screenshot. This could contain the latest 5-10 issues. The number could probably be configurable. Or it would contain the issues added/updated within the last 10 days, but a maximum of 10 issues. Something like that...
