Description

I started a thread in the forum about not working email configuration in trunk, rev 5857. The email configuration in config/configuration.yml does not work. I found a solution by reverting to the old 1.1.x email.yml, that I copied in the trunk's work copy.

Please see the thread for more information.

- Status changed from New to Closed

- Resolution set to Invalid

In configuration-not-ok.yml, you have duplicated the "production" section. The last one at the end of the file (which is empty) overrides the first one. You have to either:

- remove the production section at the end
- or move your email configuration for production at the end.

```
production:
  email_delivery:
    ...
```

```
production:              <====== duplicates the first "production" section
```

Thanks,

p.s. I thought that multiple sections with same name are possible ...
