Redmine - Feature #8423

Redirect to self (action) in MyController

2011-05-23 09:55 - Andriy Lesyuk

Resolution:	Invalid			

Description

Is there any reason for redirecting to :action => 'acount' (the same action) on successful save in MyController's account action?..

I'm adding fields to users form (including one in my contoller) from my plugin. Saving fields with after_filter... When format of fields is invalid due to redirect original form data get lost.

P.S. Do not want to alias account method to avoid conflicts...

Redirection to :action => 'account' seems logical to me, what would you expect ?

Try using after_save filter in User instead of using a controller after_filter filter ?

Without redirect_to it would render account.rhtml that is actually do the same: I wonder why redirect_to... I expect just rendering account...

Red it already ; I'm not sure this redirect is useful, indeed, but I think it's harmless and should not bother you ?

#6 - 2011-05-23 18:12 - Andriy Lesyuk

It does not bother me much... :) But it "limits" me. I guess it could be a typo so that's why reported.
