Description	
<p>Project Managers can currently add users and assign roles to them, but don't necessarily know all the permissions assigned to the role.</p> <p>As descriptive as I can be with the role name, I'm still frequently asked what users will be able to do if they grant them a role on their project. It would be very helpful to have some way of displaying the permissions granted to a role for non-Administrators.</p> <p>Perhaps a role to allow this feature would be helpful, though not really required in my case.</p>
