

Redmine - Feature #8527

Add configurable info string on login page

Description			
<p>I'm using redmine at my company together with LDAP authentication and user auto-creation. Works like a charm.</p> <p>However, historically grown, we have different logins (user/pw) for some tools. Therefore, users keep asking me which login to use for the redmine site.</p> <p>It would be helpful to have an additional info on login page that gives users the information which login to use.</p> <p>This could be an optional, configurable string in the admin menu.</p>

Had a similar request, so I just though I'd elaborate on this one.

At our site, all users are LDAP-managed, so the "lost password", "change password" and "Register" features simply don't work. Which can be a little confusing to our users.

So in addition to a custom string on the login page, it would be nice to be able to provide "lost password" and "change password" URLs to direct LDAP users to, and perhaps a custom "Register" URL to replace the existing registration function.
