Description

I'm using redmine at my company together with LDAP authentification and user auto-creation. Works like a charm.

However, historically grown, we have different logins (user/pw) for some tools. Therefore, users keep asking me which login to use for the redmine site.
It would be helpful to have an additional info on login page that gives users the information which login to use.
This could be an optional, configurable string in the admin menu.

Had a similar request, so I just though I'd elaborate on this one.

At our site, all users are LDAP-managed, so the "lost password", "change password" and "Register" features simply don't work. Which can be a little confusing to our users.

So in addition to a custom string on the login page, it would be nice to be able to provide "lost password" and "change password" URLs to direct LDAP users to, and perhaps a custom "Register" URL to replace the existing registration function.
