

Redmine - Feature #8531

Task's "assignee" should be specified by login instead of user ID

Description I'm trying to create a task in Redmine using REST API and assign to a specific user. I know the login name (or full name) of the user I want to assign the new task to, but I don't know the user database ID. I could get all users from the server and find the required one, but this operation requires "Administrator" permission, which is a non-starter in many cases. so, I propose to allow specifying the "task's assignee" with user login name and not just user ID.
