<b>Description</b>			
<p>What do you think about that? These are my point of view:</p> <ul style="list-style-type: none"><li>• Manual procedures are very prone to errors</li><li>• Especially for upgrade it's a little annoying to move all those files around the filesystem (files, plugins, themes and so on)</li><li>• Upgrades happens once in a month and every time I need to read the walkthrough on the site</li></ul> <p>Wouldn't be nicer if the install procedure would be as simple as <code>cap redmine:install</code> (or <code>cap redmine:upgrade</code> for the upgrade)?</p> <p>I made a <a href="#">proof of concept</a> of this and I used that to upgrade my installation from 1.1.2 to 1.2.0 and everything has worked. I tried to make things as generic as possible and I think this could be easily integrated directly in Redmine as an alternate method for installation/upgrade.</p> <p>Otherwise if you're not interested it can be developed as standalone gem/project, but I think that if this is integrated directly in Redmine it could be more robust with supervision of developers.</p> <p>Just my two cents.</p>
