Target version:				
Resolution:	Invalid		**Affected version:**	1.2.0

Description

Hello Jean,
You mentioned in ticket [#6345](#) that:

> You can now use the piece of xml that the API returns to update custom fields:

What I get back from the REST API is:
<custom_fields>
<custom_field name="Heading Number" id="2"/>
<custom_field name="abc_id" id="14"/>
</custom_fields>

Now, im trying to create a ticket with custom fields with the following data:

```
<custom_fields>
    <custom_field name="abc_id" id="14">
      <value>RQ_1</value>
    </custom_field>
  </custom_fields>
```

but this continues to result in (422) Unprocessable Entity.

I know the REST API is in beta status but I hope you can help me anyway.
