### Description

Feature #8365 adds a per-project setting, whether or not the last commit is reported in repository tree.

I see the use of this setting; however, I don't think it should be per-project, i.e., it should not be a single per-project
setting that affects all users of the project.

It would be much nicer if a *user* can toggle display of commit info in the repository view,
and maybe store a default (overall, or per project) among the other user-settings.
