Description

Hello,

Is-it possible with Redmine to add hypertext links that points to local windows directories when creating redmine demand?
Example :If we add a link to network directory (\\machine_test\tmp), it will not be clickable ?

Thank you in advance.

Best regards,

Riadh

Closed as you should post in forum ; BTW I think Redmine doesn't support file:// protocol (or UNC paths) for security reasons.

There is already an issue with a discussion about this security thing but I can't find it out anymore.

There is also [#2084](#).
