<b>Description</b> Hello,  I don't know if this idea has already be submit but in search form I find nothing.  My idea is to permit a user to be the manager of other user. In enterprise, there is service chiefs and it will be interesting to permit to the manager to see all the demand concerned by his service.  So it can be a new permanent field on group and a new filter specific for the manager.  What do you think ?

Exactly!

I attribute rôles to customers so that they can create projects, but they can't assign to a selected pool of users (by me of course) otherwise i have to give them control on the whole user database and... that's a problem. A group manager would be nice: assigning users to multiple groups, and theses groups to users :)

Do you need any help for this ? (ergonomy, i do not know ruby enough).

?

Thank you for your support. But i'am not a developer. I just would like to submit this idea. Maybe a developer would like to take the lead.

It will be nice to be in a roadmap !

Best regards,
