Description

Sorry if this is an unusual way to approach one of the project admins. I'm working at a private company and we use Redmine for our daily bug tracking. Out of personal need we wrote a quite comprehensive statistics application that connects to the Redmine database. We're looking for ways to donate this to the community. I'd like to discuss this with someone from the Redmine team prior to making any announcements and see how this fits. How could we establish contact?

The attached screenshot shows some of the possibilities, shrinked to hide confidential data.

- Status changed from New to Closed

- Resolution set to Invalid

Well, can you make it a RM plugin ?

I close the issue since this is not a feature nor a bug, you should post in forum a full description of the product so you could get some help.
