Target version:			
Resolution:	Invalid	**Affected version:**	

Description

Page:
HowTo Install Redmine using Debian package
(section Installation details ->Install the necessary packages)

1. problem: the package redmine-mysql was not installed

i followed the instructions and installed redmine (mysql was already)
during the automatic configuration a problem occured:

redmine-mysql was not installed and the configuration process had to be terminated.

after installation of redmine-mysql the configuration process was quite disturbed.. i had to quit the normal process and install manual.

2.problem:
under squeeze ther's a way to install several instances of redmine

i decided to install a named version instead of default. that didn't seem to work.

after the abnormal termination of the configuration process (see 1.) i had to insall manually anyway, so i cant give an exact report.
sorry.
