Target version:			
Resolution:			
Description If one creates a report on the spent time, especially when selecting a report on a per day basis, every day is a column. So, it is not possible to print or scroll comfortably through the whole table. In these cases, every day should be a row, so scrolling or printing would be possible much more easily. There could be an option, whether the time increases over the columns or over the rows of the report.
