<b>Target version:</b>		<b>Affected version:</b>	
<b>Resolution:</b>			
<b>Description</b> After some odds I had a functional environment, I thought but I could not really create svn repos with reposman. In the database table "repositories" the column `root_url` was'nt filled in. The other columns seems to be ok.			

#### History

BTW: The repos has been created but there was no way to get its content from redmine due to missing entries in column `root\_url`, I think.

##### #2 - 2011-08-10 23:54 - Toshi MARUYAMA

- Subject changed from Great svn problems with Upgrade from redmine 1.0.5 to 1.2.1 to reposman: Great svn problems with Upgrade from redmine 1.0.5 to 1.2.1

- Category set to SCM extra
