#### Description

I am using Redmine 1.1.3 and I did a copy of one of my subproject to make it a seperate project. The copy was done successfully but when I came back to the issue list, I see that the issue list (# content) is aligned to the right. I understand that # content got placed inside the # main. Correct me if I am wrong but I need a solution to make the issue list align to the center of the page as before. Can some one help me?
